

Power Network Analyzer

Description

It is an innovative instrument for measurement of the electrical parameters. It is particularly suitable for consumption analysis and control, with an excellent quality/price ratio. For the version with Rogowski coils (RGW model), connections are very quick and easy, very useful for retrofitting applications on existing switchboards or for energy audit. It is the ideal instrument to establish the measurement points on the plant. The instrument can communicate through the RS-485 serial port by MODBUS RTU/ASCII protocol.
