Description

CarbiMet & MicroCut Silicon Carbide grinding papers are the premier line of SiC grinding discs offering efficient material removal and minimal surface damage. Our discs come in various grit sizes, micron sizes and diameters.

CarbiMet Silicon Carbide grinding discs offers quick grinding times with minimal surface damage during the grinding process. Since there is less damage to remove, the amount of subsequent processing may possibly be reduced, saving valuable time the preparation process.

Apex S Backing allows for fast changeovers between CarbiMet steps. Simply remove the previous SiC grinding paper and apply the next one without needing to remove any backings or liners.

MicroCut abrasive papers provide gentle material removal and superior surface finish when processing delicate or sensitive materials.
