

Acoustic Underlay

Description

Acoustic Underlay employs impact sound [noise reduction](#) features in the floors by laying under wooden, ceramic and other floors. This solution is used for introducing acoustic improvements in the room, and has insulating material padding intended to reduce impact sound noise. Acoustic underlay products are built using natural and artificial elastomeric compounds. Dutco Tennant LLC is an important [flooring products](#) provider in the Middle East and Gulf area. We provide such products for the countries such as Saudi Arabia, Oman, Qatar, United Arab Emirates, and others. Contact us for reliable and inventive products in this region.
