

Retractable Seating

Description

The use of a retractable seating system has become commonplace in areas where space is at a premium. The extending or closing of the seating is operated either automatic or manual. Our retractable seating is an excellent technological system composed of multi-tiered platforms that uses limited space/arena for multi-purpose usage with one by one row operation electrically(motor-driven) as well as manually. The retractable seating system will be advantageous as it takes a maximum seating capacity in a limited area/space.
