

MS60 – Robotic Total Stations

Description

To meet the demands of our ever-changing and increasingly-quicker world, we developed the world's first MultiStation, combining all available measurement technologies in one superior instrument. Now, we've made that instrument even smarter. The MS60 MultiStation is the world's first self-learning MultiStation, automatically and continuously adapting to any environment, despite any challenges.

Scanning with the MS60 has been made simpler through the instant creation of point clouds with overlaid measured points and 3D models in one view. Visualizations are clearer and easier to see on an all-new 5" screen. The unique capabilities of the MS60 MultiStation truly deliver the new experience in measuring technology.

Features

- **Engaging Software:** The TS60 comes with the revolutionary Captivate software, turning complex data into the most realistic and workable 3D models. With easy-to-use apps and familiar touch technology, all forms of measured and design data can be viewed in all dimensions. Captivate spans industries and applications with little more than a simple swipe, regardless of whether you work with GNSS, total stations or both.
- **Infinite Possibilities:** While Captivate captures and models data in the field, this processes the information back in the office. A smooth data transfer ensures the project stays on track. Captivate and Infinity work in conjunction to join previous survey data and edit projects faster and more efficiently.
