

Accessories & Consumables

Description

Accessories & Consumables includes Abrasive Blades, Diamond and CBN Blades, Coolant, Vises and Flange Sets.

Abrasive Blades are designed to provide high quality sectioning results with no burning and minimal surface deformation.

Vising is a critical component to efficient sectioning. The Vises provides reliable and versatile clamping options that ensure the sample is secure and properly presented for sectioning.

Diamond and CBN (Cubic Boron Nitride) blades are the preferred blade type when precise sectioning is needed. They also perform better than traditional abrasive blades when cutting certain materials, especially very hard materials.

The Coolants are designed to dissipate heat and remove swarf from the cutting point. Proper cooling is critical to the sectioning process.

Flanges support Diamond, CBN, and abrasive blades for the best, precise and delicate cut.
