

Aluminium Entrance Matting System

Description

Aluminium Entrance Matting System are considered as the most important parts of the Facilities and shall be decorated in an aesthetic and functional way. Due to bidirectional heavy pedestrian traffic inwards and outwards, 80% of indoor pollution is formed by the dirt carried inside via the Entrances.

Considering those facts, we offer a comprehensive range of durable aluminium entrance matting systems which are used as barrier matting systems, popular for effective dirt scraping and moist wiping; additionally they are all eco-friendly which shows one of many steps we take towards being environmentally friendly. The whole range of aluminium entrance matting systems are custom made to order and suitable for indoor or outdoor use.

Properly configured systems help the establishments not only by preventing the slippery floor accidents and also save time and money by lowering the cleaning costs. Durable aluminium profiles and rubber based inserts are manufactured weather-proof while rollable design helps for easy cleaning and saving at freight costs.
