

Belt Tracking System

Description

The unique 'Pivot' belt mis-tracking mechanism will activate automatically once there is any sign of belt mis-alignment problem during operation. All it requires is to replace one of the existing idler at the belt mis-tracking area.

Features

- No lubrication need and it works on the pressure of the belt when it goes off-center.
- Belt Track is site-proven device that kick-in immediately and steer the belt back in-line.
- State-of-the-art built in design assure a durable long lasting trouble free operation
