

Channel Support Systems

Description

The channel support system and its range of profile sizes can be used to install sprinkler pipelines. Featuring scale marks, the installation slot enables pipe clamps and attachments to be fastened onto the channel support system precisely in position as required. With its comprehensive range of auxiliary installation components, this channel support system is the perfect choice where complex support structures for anchor points, racks, shelves, or complex load-bearing constructions are required.

Features

- ✓ Quick and efficient attachment of pipe sections and multiple pipe ways
- ✓ Scale marks sideways and on the side with the slot simplify the alignment of the attachment elements during installation and facilitate the measuring and cutting to length of the section on site
- ✓ For secure fixing that is adjustable laterally and vertically
- ✓ High bending stiffness due to the cross-section design
- ✓ For setting up structures with correctly measured static loads by means of diverse connection components
- ✓ Suitable vibration control elements for all support channels available
- ✓ Clean-cut appearance by the use of MPC-protection caps

Field Of Application

- ✓ Ideal for pipe installation as support structure for air ducts in dry interiors
- ✓ Variety of mounting options for pre-wall installations and shelves in combination with extensive range of system components
