

Compression Seal

Description

COMPRESSION SEAL EXPANSION JOINT consists of steel armoured nosing at two edges of the joint gap suitably anchored to the deck concrete and a performed chloroprene elastomer compressed and fixed into the joint gap with special adhesive girder. It is recommended for simply supported or continuous spans right or skew moderately curved with maximum horizontal movement not exceeding 40mm. In order to meet excellent quality standards, we are supplying Compression Seal Expansion Joint.

Our Compression Seals create crisp, linear sight lines with a patented design to eliminate waviness. They're also engineered to make installation easier and heat weldable. Compression Seal products are 100% weather tight, UV resistant and built to last through extreme temperatures and chemicals.

Features

- Superb underfoot comfort
- Very high load capacity and good anti-static performance
- Low air leakage rate
