

Diffused Aeration

Description

Diffused modules are used in municipal and industrial wastewater treatment. Easy to install, they can be combined in flexible configurations with a wide range of available options. PODs are the quick and versatile solution for original equipment or capacity upgrades of wastewater treatment facilities.

Features

- ✓ Largely prefabricated, highly cost-efficient system
- ✓ Can be used for municipal and/or industrial wastewater treatment
- ✓ Suitable for aeration of aquafarming tanks, ponds and similar facilities
- ✓ Various parameters, e.g. diffuser length, number of diffusers and perforation, can be selected as desired to suit your specific requirements.

Advantages

- ✓ Modular Stainless Steel construction
- ✓ Prefabricated design elements
- ✓ Short delivery times with stock units
- ✓ Fast, simple installation
- ✓ Configuration and diffuser array can be selected as desired
- ✓ Quick and flexible integration with air distribution system
- ✓ Can be controlled individually, compatible with all control technologies
- ✓ Ideal for capacity upgrades of existing aeration systems
- ✓ Plain end or Hose connections available
