

Fire Barriers

Description

For both vertical and horizontal application, our complete range of Rope products has 4-hours fire resistance capacity. These Fire Barriers are applicable for use in hospitals, schools, industrial buildings, shopping centres, railway stations, residential facilities, airport facilities, hotels, garages, and many more. It benefits in fire protection, thermal protection, sound protection, vapour permeability, environmental care, health care and easy installation.

It uses Rock wool which is a non-hygroscopic material and loses its property in case of contact with water. Therefore if there is a water contact risk, to protect the fire barrier water insulation must be applied prior to placing the barrier.
