

## Food & Pharma Lubricants

### Description

Food grade lubricants are used for lubrication, power transmission and corrosion protection of machines to manufacture or process foodstuffs, food related commodities, pharmaceutical products, cosmetics, tobacco products and animal feed.

Food & Pharma lubricant products comply with the standards and requirements of modern food grade lubricants. They fulfill the strict regulations of the worldwide operating organization for product testing and certifications, NSF International. In addition, many of these qualities meet the Islamic requirements and are certified as Halal

### Features

- Water resistance
- Oxidation resistance
- Low wear rate
- Compatibility with construction materials
- Good adsorption and adhesion on metal and plastics
- Steam resistance (when filling wine, beer or soft drinks)
