

GRMS and Locks

Description

Apice Hotel System is a natural evolution of the Building Automation line; it integrates a number of highly technological products, specifically designed to give greater comfort, control and safety in hotels. The Hotel System offered by Apice includes a dedicated supervisor software recently entirely redesigned to offer the end user all the features he needs. However, this is not a closed package but allows for multiple customizations, integrating other devices needed to access control management, anti-intrusion system, general supervision, billing, etc...necessary for the management of rooms and guests.

The Apice Hotel System is based on LonWorks® technology and includes all the advantages of a “open” and “interoperable” system which also allows the integration of different manufacturers that interact in the system without any communication problem with, indeed, the possibility to implement the functionalities (eg. exterior lighting control, management supervision equipment rooms, etc. ..). Moreover, the system incorporates all the advantages of LonWorks® technology, design, plant engineering and maintenance of the network including the ability to install the system in existing buildings hotel. Apice Hotel System is a natural evolution of the Building Automation line; it integrates a number of highly technological products, specifically designed to give greater comfort, control and safety in hotels. The Hotel System offered by Apice includes a dedicated supervisor software recently entirely redesigned to offer the end user all the features he needs. However, this is not a closed package but allows for multiple customizations, integrating other devices needed to access control management, anti-intrusion system, general supervision, billing, etc. necessary for the management of rooms and guests. Hotel System Features Access Control And Room Automation, Access Control in some areas with or without paid services, Hotel Services control building. The user can manage all these features easily: with the same card, he could move freely throughout the hotel facilities, enjoy the comfort of an intelligent system and exploit all the paid services.
