

Lighting Control Sensors

Description

Intelligent sensor Intelligent sensor is the sensor that has one or several intelligent functions such as self-testing, self-identification, self-validation, selfadaptation, etc.

STANDALONE SENSOR – Configurable for any room occupancy style, it switches on the connected load if the area is occupied and the illuminance is lower than the specified level (with the photocell activated). Similarly, it switches off the load if the area is unoccupied for the set time. In absence mode, the unit can also be operated from a mains-rated retractable wall switch
