

Open Gear Lubricants

Description

Dutco Tennant offers a wide range of lubricating greases for roller bearings, gears, plastic and electronic components. The applications range from rough conditions in the heavy industry to demanding applications in automotive technology and aeronautics.

According to latest knowledge in tribology, the product range complies with our customers' demands with regard to friction, wear and lubrication as well as economic and ecologic optimization of the processes themselves.

These products reliably cope with the extremely demanding requirements of gears and open drives in the heavy industry.
