

PE Sheets

Description

The rolls we supply for the construction industry are made of prime grade PE material, combining superior mechanical and optical properties for heavy duty outdoor applications. The rolls are made up of Polyethylene sheets with a thickness ranging from 50 to 500 micron and a width of 2 to 7.5 meters.

Application

- ✓ Mainly used to cure concrete on various construction sites.

Properties

- ✓ Excellent tensile properties
- ✓ Excellent impact and puncture resistance
- ✓ Very good WVTR and permeance
- ✓ High stress cracking resistance for increased shelf life
