

Portable Gas Detector

Description

Portable Gas Leak Detector is a versatile tool for performing regular leak checks in gas storage areas, around process equipment and piping or in confined spaces prior to entry. Designed for easy one-hand operation, the gas detector contains an internal sample pump and a flexible sampling wand to allow pinpoint location of the source of leakage. A large character display ensures that measured values are easily visible, and a back-light for the display ensures readability in low or no light conditions.

A unique feature of the gas detector is its ability to measure a variety of different gases by simply inserting the appropriate sensor for that gas. That makes this gas detector capable of measuring over 30 different gases or vapours, reducing the need to purchase individual detectors for each type of gas. The gas sensors for the detector can be changed quickly and easily, and there is no need for calibration when a gas sensor is change is made.
