Private CDN

Description

Private CDN comprises three functional services together that are empowered by the advantages of large scale cloud computing environment with advanced management and reporting.

Media Streaming

- Provides expertise, technology and applications required to deliver live and on-demand streaming.

- Service features include application flexibility, advanced user experience, powerful authentication, geo targeting and session limiting.

File Delivery

- Handles all the object deliveries—including video, music, images, games, and software—enabling everything from streamlined software downloads to revolutionary online media products and services.

- Service features supported are advanced contents control, powerful authentication, various types of traffic shaping, and application-based downloader.

Web Acceleration

- Reduces Web page load times by optimizing the delivery of images, web contents and documents.

- Service features include high performance caching based on the multi-core, multiple origin server supporting, fail-over supporting, and powerful purge.
