

## PVC Wall Guards

### Description

PVC Wall Guards system protects the walls from scratches, dents and scrapes. Our systems are designed of durable PVC cover fixed on aluminum retainer and in addition to its protection feature adds to the places a decorative aspect with different color combinations. All of the products are certificated for being antibacterial, fire and impact resistant.

Wall guard profiles are widely used in hospitals to prevent the damages occurred by the crashing of stretchers and wheel chairs and in shopping malls against shopping carts. As well, they are ideal for hotels, restaurants, schools and offices where the surfaces and corners of walls may be damaged due to the moveable furniture.

They are mounted on the walls at at the required height with invisible screwing system. End caps at different colors are available for all types of profiles. Profiles at different dimensions and colors are available.

### Specifications

- Profiles based on aluminum structure, covered with durable, scratch-proof and antibacterial PVC shell.
- Inner and outer corner parts and end caps complete the application system.
- Bracket parts are used to mount the wall guard profiles on a wall, generally with 50 cm gaps. The standard length of profiles is 3 mt.
