

Repair Clamps

Description

Repair Clamps made pipe repair quick & easy. Process of repair :

- Wrap clamp around pipe. Bring together using locking washer plate.
- Lock in place. Squeeze the lugs together and spin the nuts down.
- Tighten the nuts evenly working from the outside to the inside with a wrench. Detailed instructions are attached to each clamp.

We offer to provide you with Repair clamps for all kinds of special needs, including very large diameter, varying O.D. sections, high temperatures, concrete joints, and cracked iron pipe Bell joints.
