

Vibration Sound and Durability Analyzer

Description

Durability analyzer is an integrated, end-to-end solution for (road) load data acquisition. From a single software platform, you have complete control of the full load data acquisition process. It is the ideal tool for future-focused durability testing departments, offering the right balance between ease of use and functional flexibility.

Whereas, Vibration control solution gives you high-end performance. Accurate closed-loop shaker control and a maximum of built-in safety mechanisms help you minimize the risks of damaging costly test items.
