

# Vibratory Polisher

## Description

Vibratory Polisher removes minor deformation remaining after mechanical preparation revealing a stress-free surface without need for the hazardous electrolytes required by electro-polishers.

Vibratory Polisher is designed to prepare high quality polished surfaces on a wide variety of materials, including EBSD applications. The 7200 cycles per minute horizontal motion produces a very effective polishing action, providing superior results, exceptional flatness and less deformation.

## Features

- **High Quality Polish :** Unique horizontal motion provides high quality polish.
- **Deformation free specimen surface :** Horizontal motion gently polishes specimen without inducing mechanical stresses.
- **No need for hazardous chemicals :** Replaces electro-polisher and hazardous electrolytes.
- **Set-Up and Walk Away :** Vibratory action naturally rotates specimens around polishing bowl.
